Angle Sum Property

$$\angle Z^\circ = 180^\circ - \angle X^\circ + \angle Y^\circ \quad (2.0.5)$$

The vertex Y can be expressed in polar coordinate form as:

$$\mathbf{X} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \mathbf{Y} = \begin{pmatrix} p \\ q \end{pmatrix} \mathbf{Z} = \begin{pmatrix} y \\ 0 \end{pmatrix} \quad (2.0.6)$$

This can be written as,

$$\mathbf{X} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \quad (2.0.7)$$

$$\mathbf{Y} = 6 \begin{pmatrix} \cos 30 \\ \sin 30 \end{pmatrix} = \begin{pmatrix} 3\sqrt{3} \\ 3 \end{pmatrix}, \quad (2.0.8)$$

$$\mathbf{Z} = \begin{pmatrix} P + (q/\tan\theta) \\ 0 \end{pmatrix} = \begin{pmatrix} 3\sqrt{3} + (3/\tan 50) \\ 0 \end{pmatrix} \quad (2.0.9)$$

1 QUESTION No. 2.18

Construct $\triangle XYZ$ given that $XY=6$ $\angle X = 30^\circ$ and $\angle Y = 100^\circ$

2 SOLUTION

Given,

$$XY = 6, \angle X = 30^\circ, \angle Y = 100^\circ \quad (2.0.1)$$

$$XY = z, YZ = x, XZ = y \quad (2.0.2)$$

$$\text{let, } XD = p, DZ = q \quad (2.0.3)$$

$$(2.0.4)$$

These values of A, B and C are substituted with respect to X, Y and Z the triangle in code.
